To find the inverse matrix, augment it with the identity matrix and perform your operations trying to make the identity matrix to the left. Then to the right will be the inverse matrix.

$$\begin{bmatrix} 1 & 0 & 0 & 0 & | & 1 & 0 & 0 & 0 \\ 0 & 1 & 0 & 0 & | & 1 & 0 & 0 & 0 \\ 0 & 0 & 0 & 0 & | & 0 & 0 & 0 & 0 \\ 0 & b & c & d & -a & 0 & 0 & 1 \end{bmatrix}$$

$$\begin{bmatrix} 1 & 0 & 0 & 0 & | & 1 & 0 & 0 \\ 0 & 1 & 0 & 0 & | & 0 & 0 & 0 \\ 0 & b & c & d & -a & 0 & 0 & 1 \end{bmatrix}$$

Since, you 3 consists solely of zeros, the determinant of the matrix equals 0.

Thus, the matrix is not invertible

The first equality follows from the factorization of a polynomial given its roots; the leading (highest degree) coefficient (-1)" can be obtained by expanding the determinant along the diagonal.

Now, by Setting 2 to zero (simply because it is a variable) we get on the left side  $\det(A)$ , and on the right side  $\lambda_1 \lambda_2 - \lambda_n$ , that is, we indeed obtain the desired Youth.

dct(A) = 212 -- 2m

So, the determinant of the matrix is equal to the broduct of its eigen values. (provid)

(ii) PT  $Frace(A) = \lambda_1 + \lambda_2 + \cdots + \lambda_n$   $|p(t)| = dct - (A - t2) = (-1)^n (t^n - (trA)t^{n-1} + \cdots + (-1)^n dct(A))$ On the other hand,  $p(t) = (-1)^n (t - \lambda_1) \cdots (t - \lambda_n)$ ,
where the  $\lambda_j$  are the eigenvalue of A.

Where the  $\lambda_j$  are the eigenvalue of A.

50, comparing coefficients, we have  $Trace(A) = \lambda_1 + \lambda_2 + \cdots + \lambda_m$  (pmrd)

3) AB are orthogorally diagonalizable.

A, B orthogorally diagoralizable -. AB = BA.

The Spectral theorem States that a nxn metrix A is orthogonally diagonalizable iff it is lymmetric, and by defor a matrix is symmetric if AT=A.

So, now we have that AT = A and BT = B.

$$(AB)^T = B^T A^T$$

Now, its easy to show that  $(AB)^T = B^TA^T = BA = AB$ 

So, using the spectral theorem, we have that AB 18 orthogorally diagonalizable (proved)

If A is Symmetric then AT=A If B is - -

NOW (A+B)T = AT+BT = A+B

:. We have proved that (A+B) T=A+B

: A+B is orthogonally diagonalizable (broved)
